Description

Trust Solar was founded in 2017 by Managing Director, Tyger Geldenhuis, who's commitment to, and passion for the industry, run through company values and business processes alike. As one of the foremost providers of Solar PV Systems in the Western Cape, Trust Solar has built its reputation on quality workmanship and unrivalled after-sales service, and to-date has installed upwards of 6 Megawatt of Solar PV in the Province, and beyond. As a registered member of the South African Photovoltaic Industry Association (SAPVIA) and a PVGreenCard-accredited installer, Trust Solar has both the professional capabilities, and business savvy to fulfil all your solar requirements. To this end, Trust Solar, through its partnerships with various financial institutions, can offer its qualifying clients the financial benefits of its own Power Purchase Agreement (PPA). This enables qualifying clients to forego the capital expenditure commensurate with a solar system, and pay only for the power they consume. With an innovative approach to finance, and the technical skill to deliver on time, every time, Trust Solar is the service provider of choice to a steadily growing client base.
