Description

That secured a superior solar tracking / harvesting specification given seasonal winter and summer operational settings. Our quality product is 100% locally manufactured by R&G Metal Workers utilizing SA milled galvanised and/or stainless steels. The proudly South African product produce 10 to 20 percent more energy than fully imported stationery competitor products.

There are loads of SA government sponsored installation funding benefits available to assist business with solar installation. We wish to connect re your energy needs and the consulting and creation of a dedicated energy solutions portfolio.

PS, we have strong ground and roof structured design capabilities for the supporting development of systems together with maintenance and PPA solutions for sustainable energy products in the South African market.

OUR SOLAR TRACKING END USER BENEFITS: Improved Solar Harvesting Improved harvesting values have a significant and positive impact upon leasing, private partnering agreement and direct sales. Fully Serviced Solar Solution VULT delivers a fully serviced engineering solution that include funding, EPC function, installation, monitoring, maintenance and warranty. Scalable Solar Tracking Solutions We service the agricultural sector with medium (20kWp) to large (100kWp) solar system solutions. "Our farmers and agri business managers avoid environmental harm whilst self-earning on average R200 000 per year with clean energy production.
